Professional Summary

A project-based software engineer and data scientist with hands-on experience building real-world applications. I developed a Dash app, a churn prediction application, FastAPIs and also worked on a few more projects. I am always willing to learn, grow, and capable of putting in the work to deliver what's required of me. I am seeking remote opportunities worldwide, and open to employers hiring from Africa (Uganda).

Technical Skills

- **Languages:** Python, SQL, JavaScript, R, Java, MongoDB
- **Frameworks:** FastAPI, React, Django, Spring Boot
- **Data Science:** Pandas, Scikit-learn, XGBoost
- **Tools/ Platforms:** Git, Docker, Render, Microsoft Azure

Experience/ Portfolio Projects

- **Customer Segmentation Dashboard (Dash)**

I developed a machine learning project using K-Means clustering and PCA to segment U.S. households from the 2019 Survey of Consumer Finances dataset, uncovering key financial patterns and presenting insights through an interactive Dash web application.

- **NLP Sentiment Analysis**

I developed a sentiment analysis solution using NLP and machine learning to classify customer reviews as positive or negative, leveraging TF-IDF feature engineering, traditional ML models, and a BERT transformer model for performance comparison.

- **Churn Prediction Application**

I developed a customer churn prediction platform using React, Django REST Framework, XGBoost, and SHAP, enabling telecom providers to identify at-risk customers, understand churn drivers, and support data-driven retention strategies.

Education

Online courses:

- Saylor University (Software Engineering)
- WorldQuant University (Data Science Lab)

Online certifications:

- Microsoft Azure AI Essentials (Microsoft and LinkedIn)
- AI Skills for Women (Microsoft & Founderz AI Business School)
- AI Agent Security Specialist (Proofpoint Cyber Security Academy)
